Continuation of 3. NOTE: Applicants amended claim 1 to exclude azides but in claim 8 and new claim 28 left the azide structure as a choice for A1 and A2. This raises new issues with respect to the limits of the claim language. See (VII) formula. This raises new issue of one species of A from claim 1 and azide group. N with sufficient support to enable such a choice.

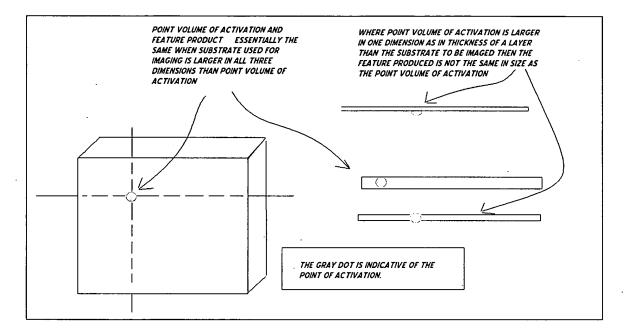

Further in claim 1 applicants have dropped back from a genus of crosslinkers to a Markush group of crosslinkers. As such, the reducing of the number of Markush groups does not clearly place this application in condition for allowance with only a cursory review as required for entry of the amendment. See particularly MPEP 803.02 and 714.13 for reasoning as to why. At best there would be an objection to all claims dependent upon claim 1 which include a diazide structure for crosslinking because of failure to further limit a claim.

Application/Control Number: 10/705,254

ATTACHMENT

The examiner adds the following drawing to show where her confusion lies with respect to point volume activation and feature produced. Further, she explains where the suggested amendment filed 24 April 2006 raises the issue of new matter and new considerations.

Does the use of "built up from elements with point volumes having at least one dimension of less than about 1 micron" exclude using crosslinking materials with dimensions less than about 1 micron? Does the language try to limit the size of the material being crosslinked? In the microlithographic arts, there are layers thinner than 1 micron. Does this language exclude such? Does the use of "Build up" attempt to limit the material to be crosslinked to that which would allow such a "build up"? Are applicants trying to include some limitation with this language on "three-dimensional structure"? Are single layers or strings of point volume being excluded because they do

Art Unit: 1752

not "build up"? For these reasons, the examiner considers such language to be a new issue with respect to all the claims presented on 24 April 2006.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Cynthia Hamilton whose telephone number is 571-272-1331. The examiner can normally be reached on Monday through Friday 9:30 am to 5:00 pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Cynthia H. Kelly can be reached on (571) 272-0729. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
